

## Integrated solution for smart retailer

### Complete Control over your Warehouse to Improve Customer Satisfaction

In today's competitive business environment, an efficiently managed warehouse is the key to achieving timely order fulfillment and meeting customers' needs. The SMS Warehouse Module provides a full-featured solution to control and streamline the warehouse operations in real time. Integrating the ordering and purchasing processes in your operation is critical? The same system lets you control your warehouse inventory! SMS advanced purchasing system provides all the flexibility you need to have accurate cost and inventory value. The process of Purchasing, Receiving and Billing will assure that you have paid the best price for your goods. Our input screen is completely configurable, so you can create your screen layout with exactly the information you need, from the full cost information with all the deals to the inventory on hand. In addition, the inventory committed to other customers, purchasing and ordering will be managed efficiently.

### Sales Orders and Shipping >

The Warehouse module provides ordering and shipping functions to ensure accurate and efficient management of your orders. The complete process is handled from ordering to shipping, invoicing and receivable operations. From the minute the phone rings, the operator gets instant access to the customer file. You can search customer by any type of field and obtain all the relevant information on screen. Efficiency is essential when you take orders. Quick entry screen layouts have been designed to facilitate this task. The customer history, with the list of items he bought, is displayed on screen so the operator can help the customer in his choice.

At the end of the day, the batch of orders is waiting in the system to be processed. The warehouse staff can choose to process the orders as they come or process them all during the

night shift. SMS committed process makes sure that you have enough inventory to cover all your orders. Right from the beginning of the process you can see what is your shorted and react accordingly. Printing picking tickets by section and splitting your orders can be managed by the system. For every order, you can confirm that every section has been picked up and make sure you are not forgetting anything before closing the shipping. You attach your customer to a route and it is easy to print your shipping documents by route at the end of your shift.

Invoicing adds the weight and cubing shipping rates, if you have any, and this is controlled by customer. You can either charge all orders or pay it with any media available. The receivable being done by the same system, SMS integrates all your sales processes in one software.
